Rev	Date	Revision History
X1	16 AUG 2022	Initial revision
A	31 OCT 2022	Agile release
B	20 JUN 2023	- GATE_IN connected to !Q instead of Q of U10 - added R177, D62, D64, D66 - added R178, C176 - moved C67 to be over R77 - add 2x LPF filter and holes for external NTC for the 2 unused GPIO pins (pin 54 and pin 55) of the BCC (U1) - changed J23 to a female header - Replace the double FET (Q15, Q16) 12V switch with the Toshiba TCKE712BNL,RF - split the battery ground (BGND) and output ground (OGND) - changed R164 to a 100k DNP - added the VCC_12V_EXT to J21 pin 12 - replaced all SS1H10-E3/61T diodes with this ES2B diode - replaced SWITCH MOSFETs with 3 current strings (6 FETs total) with the Nexperia PSMN2R0-100SSF - changed R177 to be a 0805 - added R186, R188, R189 - added SJ19-SJ22
C	12 AUG 2024	- Added fuses for cell leads - Added isolators between MCU and BCC (SPI + sig.) - Fixed voltage ratings - Fixed floating cell5 when using less than 14 cells - Increased FET Tfall time (R159 to 4.70hm) - Changed balance resistors to 560hm 1210 and 100hm 0805 - Added low-pass filters for signals crossing grounds - Added protections for 3V3 LDO and overcurrent circuit - Added diodes to the VPWR replacing ESD diode - Added TVS and normal diode between power_in and BGND - Added PESD2CANFD24L-T to CAN0 - Added LED for CAN0 named LED_CAN0 on PTE3 - Added PMEG2020 diode between Q12 and 12V_ON - Added ESD protection temperature sensor connectors - Added MMSZ3V9T1G zener diode on 3V3_SBC. - Removed the EMC balancing caps, C173, C174, TP6, TP7 - Added more text to explain schematic - A085 ARAS release
D	24/JAN/2025	- Add 2 diodes (PMEG2020EPK) to VDD2 of U31 (D80, D81) - Change the SE050C to SE051C (pin compatible). - Update block diagram (SE050C to SE051C, CAN LEDs) - Add CAD note to D79: "Place LED close to CAN0 connector on top - Add CAD note to D46: "Place LED close to CAN1 connector on top - Replace EOL op-amp U12 (NCX2200GW) by NCV2200SQ2T2G - Adding Interposer 7S in Page 11 (Switch Matrix)
D1	23/MAY/2025	- DNP all components under Page 7 (NFC) and J7 on page 6 and modifying Block Diagram page 2

SWITCH

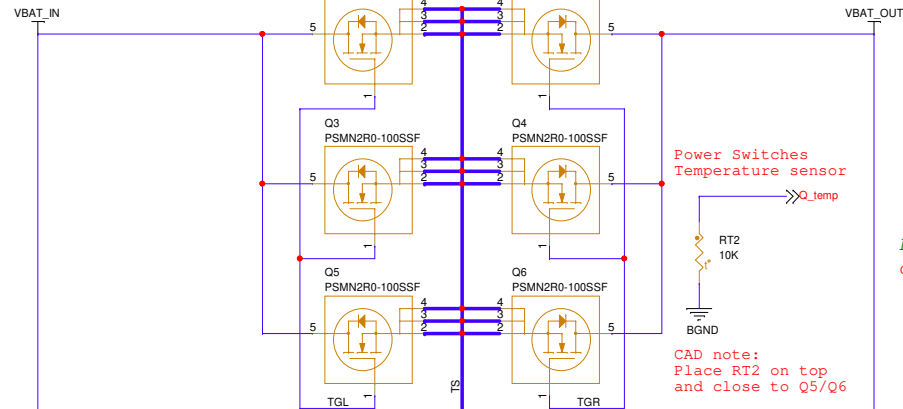

Power switch

Warning: power switch area can become hot!

CAD note:
Cooling VIA's needed at FETs

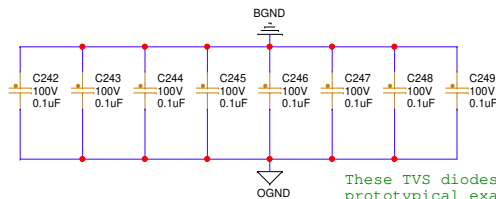

Battery +

System/Charger +

Power Switches
Temperature sensor
Qtemp

CAD note:
Place RT2 on top
and close to Q5/Q6

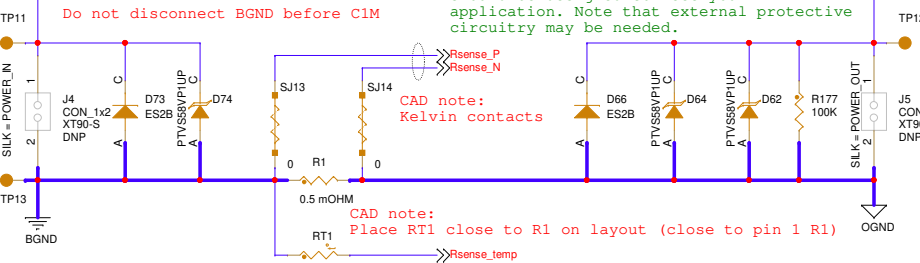

These TVS diodes (D64 & D62) are a basic
prototypical example. Protection of the FETs
should be designed to meet your
application. Note that external protective
circuitry may be needed.

Do not disconnect BGND before C1M

Battery

System/Charger

CAD note:
Place RT1 close to R1 (close to pin 1 R1)

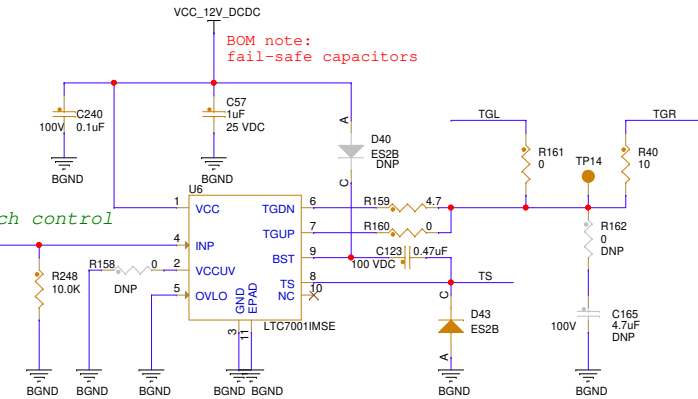

Shunt Resistor temperature sensor
Note:
BGND = Battery GND, OGND = output GND

Gate driver for power switch

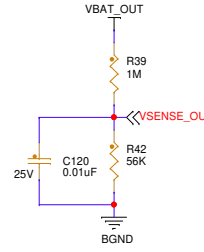

BOM note:
fail-safe capacitors

Power switch control

GATE_IN

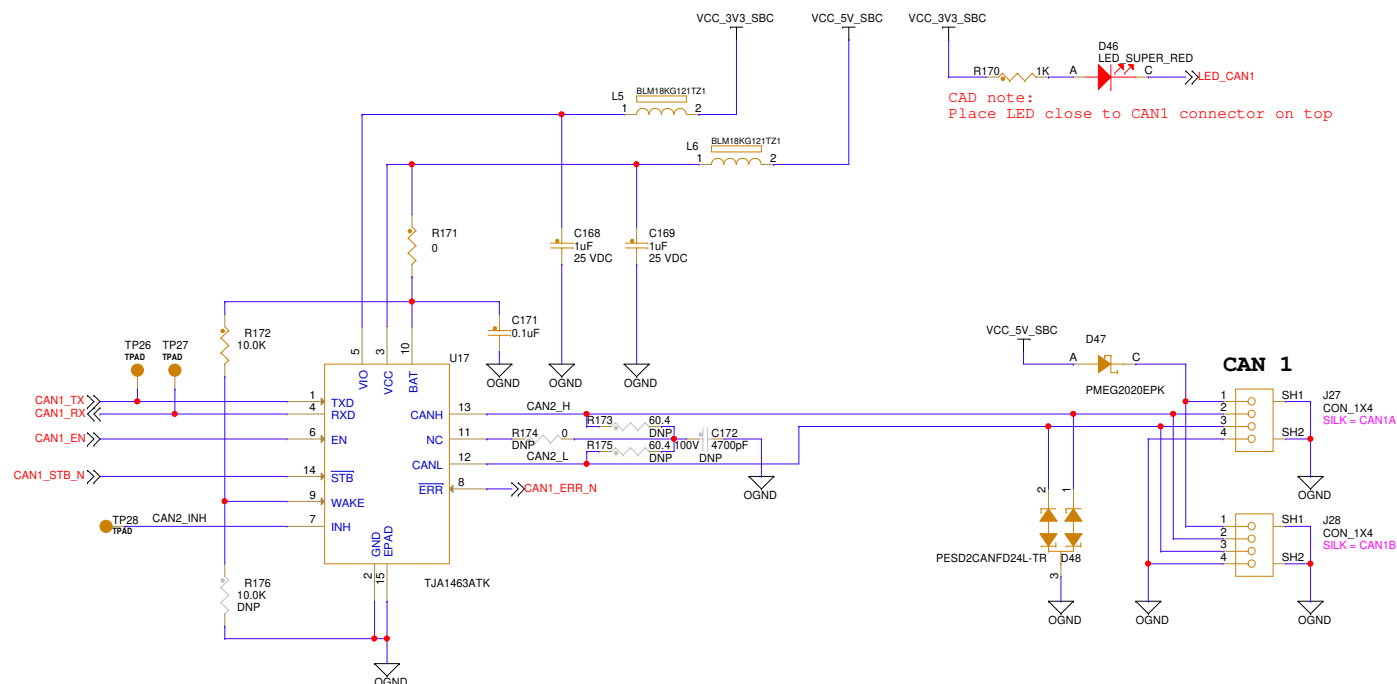

CAD note:
Place R42 and C120 close to the BCC (U1)
